

Seven Floors High

Seven Floors High is based around a true story of life inside iaxis, a London based Internet start-up during the NASDAQ boom of 2000. Written with style and humour, the story is a personal account of one individual who saw the paper tiger from the inside. Set against this backdrop, the book also contains a very powerful Non-Fiction sub-theme describing in great detail, with insight and analysis, several covert intelligence operations carried out by Americas National Security Agency and the Central Intelligence Agency. This intelligence sub-theme pays very close attention to the build up of the Iraqi invasion of Kuwait in 1990 and also details several other covert operations from recent history.
